Annex-Bios API

Documentation

By: Pulllee Inc.

Kaj Boogaard, Ross van Teeffelen, Sebastiaan Heins

PHP:

Curl

```php
<?php
    $ch = curl_init();
    $url = 'API_URL';
    curl_setopt($ch, CURLOPT_URL, $url);
    curl_setopt($ch, CURLOPT_HTTPHEADER, [
        'Authorization: **API KEY**',
        'Content-Type: application/json',
        'request: {"type":"**TYPE OF REQUEST**", "page": **WHICH PAGE IS
REQUESTED**, "id":**ID OF MOVIE**}'
    ]);
    curl_setopt($ch, CURLOPT_RETURNTRANSFER, true);
    $response = curl_exec($ch);
    // $response = json_decode($response); <- uncomment to convert to json
    var_dump($response);
?>
```

The text in white and between " ** " should be filled in yourself.

You've gotten an API key from us, be careful with putting it online, only a certain amount (2000) of requests can be made an hour.

When not searching for a specific movie (in the type "now playing" i.e.) no id is required and can be left empty.

When requesting "now_playing" the requested pages should be filled out, otherwise this can be left empty.

Four different requests can be made:

- movie   args => (INT: id (id of the movie))
- cast   args => (INT: id (id of the movie))
- now_playing   args => (INT: page (optional, defaults to 1))
- showing   args => (INT: day_of_year, STRING: location)

JavaScript

Fetch

```javascript
const url = 'API_URL';
const headers = {
  'Authorization': '**API KEY**',
  'Content-Type': 'application/json',
};

const requestData = {
  type: '**TYPE OF REQUEST**',
  page: **WHICH PAGE**,
  id: **MOVIE ID**,
};

const options = {
  method: 'GET',
  headers: headers,
  body: JSON.stringify(requestData),
};

fetch(url, options)
.then(response => response.json())
.then(data => {
  console.log(data);
})
.catch(error => {
  console.error('Error:', error);
});
```

The text in white and between " ** " should be filled in yourself.

You've gotten an API key from us, be careful with putting it online, only a certain number of requests can be made an hour.

When not searching for a specific movie (in the type "now playing" i.e.) no id is required and can be left empty. When requesting "now_playing" the requested pages should be filled out, otherwise this can be left empty.

Four different requests can be made:

- movie   args => (INT: id (id of the movie))
- cast   args => (INT: id (id of the movie))
- now_playing   args => (INT: page (optional, defaults to 1))
- showing   args => (INT: day (defaults to today), STRING: location)

Example responses (200)
